

ABSTRACT

With the Paris 2024 Olympics, social media platforms are expected to experience a surge in global interactions, which can lead to an increase in hate speech due to varying cultural, political, and personal viewpoints. Detecting hate speech in this setting involves analysing both text and emojis, as emojis can modify or intensify the tone of messages. Addressing this challenge is essential to maintain a positive online environment and to ensure respectful exchanges during the international event.

This project aims to develop a context-aware tweet classification system using Long Short-Term Memory (LSTM) and Bidirectional LSTM (Bi-LSTM) networks. The project focuses on preprocessing the data, which includes data cleaning, emoji-text association, lemmatization, handling URLs and mentions, tokenization, and the removal of stop words. The dataset is then labelled into Hate and Non-Hate categories, with special attention to the role of emojis in prediction. Feature extraction techniques like word embedding (GloVe), emoji embedding, and N-grams (bi-grams) are used to represent the tweet's contextual features. The system is implemented using LSTM and Bi-LSTM architectures, both with and without DB Scan clustering and Attention Mechanism. The evaluation metrics for the project include accuracy, precision, recall, F1-score, and others. The highest accuracy achieved with LSTM model is 98.93% Bi-LSTM model is 98.97%, showcasing the effectiveness of the context-aware approach.

The system is developed on the Jupyter Notebook platform, which provides an interactive environment for data exploration, model training, and testing. Jupyter Notebook's integration with Python and compatibility with popular machine learning libraries such as TensorFlow and PyTorch make it suitable for implementing and fine-tuning complex models like LSTM, Bi-LSTM and DB Scan Clustering.

ACKNOWLEDGEMENT

I express my sincere thanks to **Dr. RAVICHANDRAN KANDASWAMY**, Professor and Dean, Anna University, MIT Campus, for providing me an opportunity to carry out the project work with all the facilities.

I wish to express my sincere thanks to **Dr. M.R. SUMALATHA**, Professor and Head Department of Information Technology, Anna University, MIT Campus for providing all the facilities that were needed for proper execution of this project.

I render my sincere thanks to my project guide, **Dr. M.R. SUMALATHA**, Professor, Department of Information Technology, Anna University, MIT Campus for her valuable guidance, encouragement and moral support during this project. Her systematic approach guided me to shape my project within the stipulated time.

I wish to extend my sincere thanks and gratitude to the panel members, **Dr. M. R. SUMALATHA**, Professor, **Dr. R. GEETHA RAMANI**, Professor, and **Dr. E. PUGAZHENDI**, Teaching Fellow, for their valuable suggestions and encouragement during the reviews.

I also thank my faculty advisor, all the teaching and non-teaching staff members of Department of Information Technology, for their support in all aspects. This project would not be at this stage without the co-operation extended by the almighty, family and friends. I am immensely grateful to all the people who helped me directly and indirectly in the successful completion of this project.

JANANI GOPALAKRISHNAN
